Table of Contents

CONCLUSIONS: CRITICAL LIMB ISCHEMIA COSTS	6
Critical Limb Ischemia-Only Costs	6
Critical Limb Ischemia and Cardiovascular Costs.....	6
All-Cause Costs	7
INTRODUCTION.....	9
COST OVERVIEW	9
Direct and Indirect Healthcare Costs	9
Components of Costs	10
Cardiovascular and All-Cause Costs Should be Included	10
Long-Term Costs Represent Significant Resource Utilization and Should be Included	11
U.S. Cost Data Employed for Cost Estimates.....	11
Hospital Costs and Charges	12
Costs Inflated to 2018 Dollars	12
CARDIOVASCULAR AND ALL-CAUSE CRITICAL LIMB ISCHEMIA COST ESTIMATE	12
CRITICAL LIMB ISCHEMIA PER PATIENT HOSPITAL COSTS.....	14
Not All Inpatients Undergo Revascularization or Major Amputation.....	15
Cardiovascular and Other Non-Critical Limb Ischemia Costs Add Significantly to Total Costs	15
COST ESTIMATE BASED ON CRITICAL LIMB ISCHEMIA ONLY	16
Annual Costs.....	16
Long Term Costs.....	16
COSTS VARY BY TYPE OF INTERVENTIONAL THERAPY.....	17
TREATMENT WITH PRIMARY AMPUTATION IS THE MOST COSTLY.....	17
Cost of Major Amputation Exceeds \$22 Billion.....	17
Direct Medical Cost	17
Lifetime Medical and Nonmedical Expenses Add to the Burden.....	18
Unquantified Patient Outlays and Societal Costs Add to the Total	18
Hospital Costs of Major Amputation Exceed Those of Revascularization	19
Factors Driving Up Major Amputation Costs.....	20
Mortality	20
Morbidity	21
Mortality and Morbidity Cost Calculations	21
Revision Procedures.....	22
Total Costs	22
Readmissions	23
Outpatient, Nursing Home and Other Healthcare Services Increases Cost Burden	23
Ischemic Complications.....	24
DIRECT MEDICAL COSTS OF MAJOR AND MINOR AMPUTATIONS	25
AMPUTATION AND MORTALITY INCREASE WITH DISEASE SEVERITY .	25
Amputation	25
Mortality	26
TREATMENT COSTS INCREASE WITH DISEASE SEVERITY	27
Critical Limb Ischemia Treatment Costs Rise with Rutherford Category.....	27

INSURANCE STATUS PREDICTS DISEASE SEVERITY AND COSTS.....	28
Insurance Status Predicts Disease Severity at Presentation	28
Medicaid Insurance Predicts Amputation	28
Medicaid Patients Incur Higher Revascularization Costs.....	28
COSTS ARE PRIMARILY INPATIENT	28
Inpatient Treatment More Costly than Outpatient	29
Hospitalizations Increase with Disease Severity	29
Inpatient Revascularizations More Costly than Outpatient	29
Shift to Outpatient.....	30
EMERGENT ADMISSIONS COMMON	30
Increased Mortality and Amputation	30
HIGH AND INCREASING PREVALENCE OF SERIOUS COMORBIDITIES ...	31
Non-CLI Causes—Almost Half of Hospital Admissions	31
Treatment of Expensive Comorbidities Elevates Hospital Costs	31
In-Hospital Death from Cardiovascular and Other Events	31
Certain Comorbidities Increase the Risk of Amputation	32
Multiple Chronic Conditions (MCC) Increase Healthcare Utilization and Expenditures	32
PRESENCE OF POLYVASCULAR DISEASE	33
Comorbid Cardiovascular Disease Highly Prevalent in Critical Limb Ischemia	33
Cardiovascular Hospitalizations	34
Higher Rate of Cardiovascular Events in Critical Limb Ischemia	35
Major Adverse Cardiac Events Increase with Number of Vascular Beds Involved.....	35
Revascularizations Increase with Number of Vascular Beds Involved	35
Cardiovascular Costs in Peripheral Artery Disease Patients	36
Estimated Cardiovascular Costs in Critical Limb Ischemia	36
UNDERTREATMENT OF CARDIOVASCULAR DISEASE RISK FACTORS ...	37
Suboptimal Risk Factor Management Increases Risk of Major Adverse Cardiac Events (MACE) and Major Adverse Leg Events (MALE)	38
Favorable Cardiovascular Risk Factor (CRF) Profile Reduces Costs	38
Critical Limb Ischemia—Estimated Medical Cost of Suboptimal Management of Modifiable Risk Factors.....	39
MAJOR ADVERSE LIMB EVENTS (MALE)	40
Incidence	40
Cost of Major Adverse Limb Events	41
DIABETES AND CRITICAL LIMB ISCHEMIA	41
Over Half of Those with Critical Limb Ischemia Have Diabetes.....	41
Diabetes Increases the Risk of Critical Ischemia.....	42
Diabetes Increases Severity of Limb Ischemia.....	42
Diabetes Increases the Risk of Amputation	43
Elevated Risk of Reamputation	44
Risk of Amputation Related to Severity of Diabetes Measured by HbA1c	44
May Increase Mortality.....	45
Diabetes Increases Costs.....	45
United States Data.....	45
International Data.....	46

Postoperative Hyperglycemia Increases Adverse Events After Revascularization	47
Longer Length of Stay and Infections	47
DIABETIC FOOT ULCER (DFU) COSTS	48
READMISSIONS DRIVE UP COSTS	48
High Rate of Readmissions—Majority Unplanned	48
Lower Critical Limb Ischemia-Only Readmissions	49
Predictors of All-Cause Readmission	49
Severity of Ischemia	50
CLI-Only Readmissions.....	51
Unplanned Readmissions—Higher Mortality but Lower Major Amputation	52
Costs.....	52
Readmission Costs Compared with Initial Admission Cost	53
Majority of All-Cause Readmissions Not Due to Primary Critical Limb Ischemia	53
Infection	54
Readmission Causes and Frequency Vary by Disease Severity and Type of Procedure	54
Most Causes of Readmissions are Modifiable.....	55
MULTIPLE PROCEDURES.....	55
Multiple Procedures Add to Costs	56
REFERENCES.....	57
INDEX OF TABLES	71
INDEX OF FIGURES	73
